BRIEF DESCRIPTION OF PROJECT AND RELEVANCE TO THIS CONTRACT

The project included the design of a single story public events center catering to wedding, wedding receptions, family reunions and other similar type events. The building design takes on elements of a barn structure with heavy timber construction. The facility is also equipped with a catering warming kitchen, public restrooms and a bride's room. The building is nestled in a valley adjacent to some natural rock formations and a stream creating the perfect environment for special events. It is surrounded by a significant and mature tree population and other farm implement buildings. In order to maximize the character of the building, the parking serving the facility is remote with a meandering walking path connected to the building.

Sq. Ft. 4,800 SF * Cost: \$550,000 *

Role: Architectural, Structural and MEP
